1. **Top-Performing Product Categories**
   If one year sales amount and sales products are given .

Examine the Total of all 12 monthly sales as Rs 297125.56 . Books , Toys , Home and Kitchen , Health ,Electronics, Cloths ,Sports these items are mostly selling products .If Top Product Categories are Books, Electronics , Toys , Health.

- Categories with *higher review counts* and *mid-range prices* often perform best.
- If high product still sell well with strong reviews as premium strong works.
- If sales drop sharply with increase as category is price sensitive.

Expected insight:
✓ *Toys , Electronics , Books* often show high sales volume based on the preview.

---

2. Pricing Impact on Sales & Reviews

General pattern visible from preview:

- Higher-price items tend to have *lower review scores*.
- Mid-priced items tend to have more sales and better customer sentiment.
- Customer demand at low price and good quality products
- Cheap rate
- Low delivery charges
- Low maintenance
- Warranty for electronic products
- Attractive product

Insight:
✓ Products priced in the **300-500 range** may be the sweet spot with better review scores & higher units sold.

---

3. Seasonal Sales Trends

Sales Jan to Dec show variation from **min = 4** to **max = 1000**, suggesting clear seasonality.

Common trends:

- Sales spike around month Oct , Feb , Mar , July , Nov .
- Some categories peak early in the year depending on product type.
- Depending on price
- Depending on Quality
- Promotion or Add
- Seasonal demand product
- Branded product
- Weekend offer , special offers etc.

Expected insight:
✓ Months **Oct, Feb, Mar, July , Nov** likely have the *highest seasonal demand*.

---

4. Customer Satisfaction show through Review Score and Review Count.

- High review scores above 4 to 5 with high review counts indicate strong brand trust.
- Low review scores below 1 to 2.5 with low review counts indicate product quality problems.
- Middle review scores above 2.6 to 3.9 with medium review counts indicate medium quality products.

Insight:
✓ Some products have *low review scores but high review count* → these should be investigated for improvement.

Recommendations

1. Improve low-rated products to top-selling products

If products have:

- **High review count - above 4**
- **Low review score - below 2.5**
  Then customers are unhappy even though selling price are high and bad quality

product .So we give quality product at low price and combo product .Also give gift vouchers , weekend offers and special discount offer etc. Improve packaging quality . Avoid delivery expense. Provide good quality and more quantity product. Give more promotions and add . Give warranty for electronic products. Good packaging . Attractive products and quality.

Improve product quality, descriptions, packaging.

---

2. Focus marketing on high-scoring categories

Products with:

- Total Review Score -527K
- Average Review Count – 3.03
- Heigh Review Score – above 4
- Low Review Score – below 2.5

These are ideal for ads, promotions, cross-selling.

---

3. Price Optimization

Since mid-range products perform better:

Target ideal pricing around **100–300**
Reconsider pricing for poorly performing high-end items.

---

4. Use seasonality for campaigns

If months Oct ,Feb, Mar, July have high sales:

Launch:

- Holiday bundles
- Discount campaigns
- Inventory stock-up in advance
- Weekend Offers

- Good Product at low price
- Give gift Voucher
- Advertising and Promotion
